The huge Amazonia region is considered by its important biological diversity and people that live in harmony with the jungle, providing a peaceful atmosphere. They make their village homes in the time-honored manner—framed with poles cut from the forest and thatched with palm leaves or other vegetation.

The principal environmental problem of this area is the deforestation, which occurs from fires provoked by the expansion of agricultural activities and the time use has changed. This situation has provoked much concern internationally. Some people that live in Amazonia are in danger situations.

There seems to be an inexhaustible supply of water in Brazilian Amazonia. Because this thinking permeates the minds of many people, it is abused, misused and wasted. Others, specially people from rural areas or some that live in outskirts districts, they have to use the so much time that they could use for study and work just to get water from far places to drink and use it in general

Movements from home to work in rural areas

- Until five minutes: 19.04%
- From six to half-hour: 43.31%
- More than half hour to one hour: 29.57%
- More than one hour to two hours: 6.55%
- More than two hours: 2.13%

Today, many people in Amazonia continue to live according to tradition. As the forest provides the materials necessary for transportation, the men fell trees and carve canoes for navigating their river highways, some people that work in bigger communities, they go and back working in canoes, others have a motorcycle or a horse. Otherwise, many people from rural populations also had not the means to provide well for his family and are moving to cities, unhappily living in subnormal areas, with bad quality of life. The rural populations are increasingly disturbed by loggers, gold seekers, and others. Yet, their day-to-day existence is affected by the waves of immigrants now entering their forest home.

The tribal groups dress and decorate themselves in a variety of ways.

The Amazonian peoples know thousands of different plants and use the forest as a medicine chest. From it they extract treatments for snakebite, dysentery, and skin ailments, to name a few.
