At present moment most countries in the world are in difficult geopolitical and economic conditions. Globalization processes are coming to the local and regional levels. However transnational corporations are acting globally and conquering for the markets, looking for the suitable personnel worldwide. In this research we are considering the interaction of labour market, education and real sectors of economy. The interdependence regulations are defined between the program choice made by the international students from the developing and 3rd world countries coming to study to the developed countries and the perspectives of future economic growth of their home countries where they return.

Keywords: labour market, education systems efficiency, forecasted economic development, cognitive consumer behavior.
