System of National Accounts (SNA) are international standard and a key to economic analysis. It plays an important role in both developing and monitoring economic policies. Ukraine at least initially compiled only a small part of the SNA 2008. Implementation of the fully integrated SNA 2008 will take some time and will need to progress at a rate determined by the differing needs and circumstances of the Ukraine. Ukraine will need to revise its underlying accounting system to reflect the accrual accounting principles and revised classifications of the SNA 2008.

**Keywords:** methodological changes, classifications, GDP components
